

Work Experience

Engineering Manager	Shippo	Oct 2024–Present
Billing, Fraud Prevention, and Insurance (BFI) Team San Francisco, US (Remote)		
- Managed a team of 9 engineers including staff, senior, and mid-level engineers. - Increased Shippo's margins by delivering critical projects to reduce payment processing fees and fraud losses. - Led the team to fix critical billing flows to increase reliability, reduce database load, and increase observability. - Structured the team in two sub-teams to optimize deliverables and foster closer collaboration. - Partnered with product managers and stakeholders to build quarterly and annual operating plans. - Partnered with a staff engineer to build a north star tech plan for billing. - Transitioned from Auth to Insurance domain ownership in October 2025.		
Senior Backend Engineer	Shippo	August 2023–Oct 2024
Billing, Fraud Prevention, and Auth (BFA) Team San Francisco, US (Remote)		
- Built a new metered billing platform capable of handling millions of daily API usage events. - Optimized the performance of a webhook handler making it 20x faster. Related blog post. - Built an invoicing fee framework, based on payment methods, to reduce our network payment processing fees. - Improved engineering productivity with internal libraries and tools for Apache Kafka, AWS SQS and AWS DynamoDB. - Organized and migrated millions of users to new plan tiers increasing annual SaaS revenue. - Guided the development of a library to run long SQL queries on Databricks instead of AWS Aurora Postgres. - Tech stack: Python, Django, Django Rest Framework, Celery, FastAPI, PostgreSQL (AWS Aurora), Apache Kafka, Go, AWS SQS, AWS DynamoDB, gRPC, Databricks, Kubernetes, Terraform.		
Senior Software Engineer	Terrastruct	2022–2023
San Francisco, US (Remote)		
- Optimized the graph layout engine memory usage and speed by 4x using algorithms and data structures. - Led the development of a two-way (commit, push, pull) integration between D2 Studio and GitHub. - Fixed an issue with concurrent updates when multiple users were working on the same diagram. - Researched and implemented the engine for hierarchical and sequence diagrams. - Contributed to Terrastruct's D2 (13k+ stars on GitHub) open source project, notably PowerPoint and GIF exports. - Built an OAuth2 and OpenID Connect (OIDC) compliant Single Sign-On (SSO) flow for self-hosted customers. - Improved the team productivity with tools to simplify debugging and profiling the layout engine. - Implemented a suite of end-to-end (e2e) and performance tests using k6js. - Employee #6. - Tech stack: Go, Typescript, React.js, PostgreSQL, Redis, AWS, k6js.		
Senior Backend Engineer	Zyte (formerly Scrapinghub)	2021–2022
Platform (Scrapy Cloud) team Cork, Ireland (Remote)		
- Built a scalable job scheduler to improve resources usage and job scheduling throughput for a big customer. - Organized processes and "on call" rotation to reduce interruptions, allowing the team to focus on sprint tasks. - Operated highly available, distributed services and web APIs on top of a cloud cluster with 30+ servers handling 200k+ requests per day, thousands of web crawling jobs scheduled per hour and millions of records scraped per day. - Tech stack: Python, Django, Django Rest Framework, Flask, MySQL, Apache Mesos, Celery, RabbitMQ, Apache Kafka, Faust, Grafana, Prometheus, Docker.		

Software Engineer	Zyte (formerly Scrapinghub) Cork, Ireland (Remote)	2018–2021
- Designed and built a generic crawler to download files and articles from thousands of sources. Related blog post. - Operated a pipeline (ETL) with 50+ crawlers delivering high quality datasets/week for a FAANG. - Operated a large scale, distributed pipeline with 10+ crawlers delivering TBs/month of product and reviews data. - Built a crawler to monitor the web for business-to-business (B2B) products being sold in consumer (B2C) platforms. - Built a "search engine" pipeline to monitor pages for a given set of keywords and its variations on a daily basis. - Mentored 3 students during Google Summer of Code (GSoC) in 2019 and 2020. Contributed to scrapy (47k+ stars on GitHub) and other open source tools from Zyte. - Tech stack: Python, Scrapy, AWS, ETL, Docker, Hadoop.		

Software Engineer	Inventti Myrp - Cloud ERP and Point of Sale (POS) Blumenau, Brazil	2015–2016 / 2017–2018
- Built a standalone POS (Point of Sale) software bringing in thousands of new customers. - Built a web API and integration SDK for Myrp to synchronize data with any POS software. - Built a reliable state machine to ensure invoices were properly integrated with a third-party service. - Tech stack: C# .NET, ASP.NET, SQL Server, RabbitMQ, PostgreSQL.		

Software Engineer	Ellevo Blumenau, Brazil	2012–2015
Tech stack: Javascript, jQuery, SQL Server.		

Education and Certifications

• M.Sc. Computer Science , Universidade Federal do Paraná (UFPR), Brazil.	2016–2018
• B.Sc. Computer Science , Universidade Regional de Blumenau (FURB), Brazil.	2011–2015

Other Skills

- Technologies: Git, Event Streaming, Batch Processing, FastAPI, OpenCV, Tensorflow, PyTorch.
- Other: Agile, Continuous Integration (CI), Continuous Deployment (CD), Unit test, Integration tests, Performance tests (k6), test driven development (TDD), SOLID, Design Patterns.

Extracurricular

Meetup Host	Hackerspace/GruPy Blumenau Blumenau, Brazil	2018–Present
- Hosted 50+ tech meetups in Blumenau and on YouTube. - Organized FLISoL 2023/2024 with 9 talks, 2 workshops and 50+ attendees. - Organized Blumenau Dev Day 2019/2023 with talks from 10 local tech communities and 100+ attendees.		
Adjunct Professor	Universidade de Blumenau (FURB) Blumenau, Brazil	2019–2021
- Python and R for data science: taught the basics of Python and R for data science, including core packages such as pandas, matplotlib, scikit-learn, scikit-image, and numpy. - Information Retrieval: taught an introduction to information retrieval, including web crawlers, reversed indices, boolean queries and spell checking. - Data visualization: taught the core concepts about data visualization and types of plots using matplotlib.
